The Best for Your Feminine Hygiene

Why OmbacPlus Feminine Hygiene Care?

Female hygiene is often described as the need to maintain a clean and dry area around the vagina or vulva. Proper hygiene is usually sufficient to avoid occurrences of microbial infections. However, many women do suffer various degrees of discomfort when infections take hold.

Allergy to soap and detergent chemicals can cause skin irritations, as do chemicals in sprays and fragrances for female intimate areas.

A very common cause of these discomforts is a fungal infection by a species of *Candida*. Bacteria and viruses are also causative agents. Sexually transmitted diseases (STI) are also major causes of vagina infections.

When simple hygiene cleanliness using warm water and mild soap do not eliminate or reduce the mentioned-risk symptoms, a broad base antimicrobial that is effective against bacteria, fungi, viruses may be the solution. The added advantage is that this solution of **OmbacPlus Feminine Hygiene Care** is chemical free and derived from a very mild dilute saline

We Can Help You with OmbacPlus Feminine Hygiene Care

A very effective antimicrobial that is **99.9%** pure water. The active ingredient, **hypochlorous acid (HOCl)**, is generated by electrolysing dilute salt and stabilised.

It is **non irritating** and **non toxic** to skin and mucus membranes. Verified to kill most microorganisms on contact and within seconds.

WHEN TO USE

OMBACPLUS FEMININE HYGIENE CARE

1. After using the toilet or showering, spray on the intimate area including vulva and anal.

2. Spraying before and after intercourse.

3. Spraying during menstrual, pregnant, childbirth and menopause period.

4. Spraying after exercise or sport activities.
